# Topics to be Covered

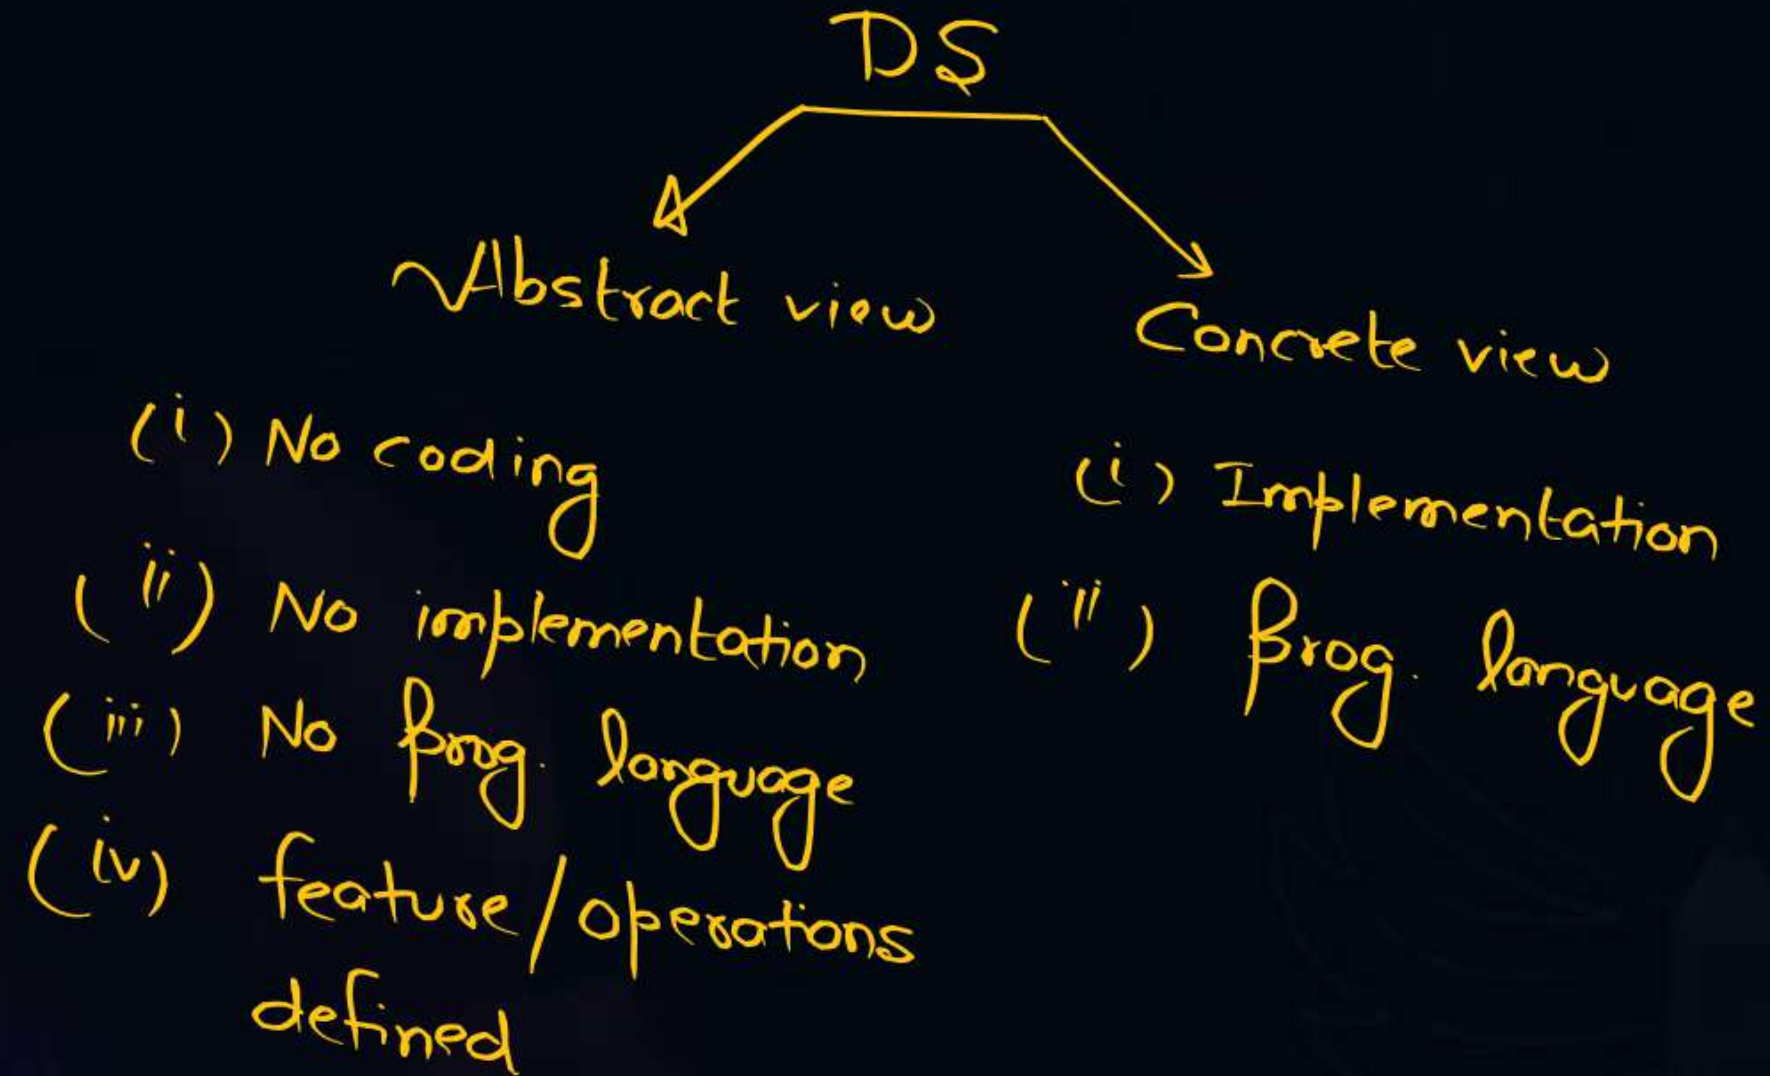

Topic

Stack and Queues Part 01

## Topic : Stack - 1

# Stack

- \* Linear data structure.
- \* Order of deletion of element is opposite order of insertion.
- \* It works on Last-In First-Out policy.
- \* Elements are inserted & deleted only from one end called TOP of the Stack.

## Stack as ADT

Stack of numbers

(i) Push() : Insert

(ii) Pop() : delete

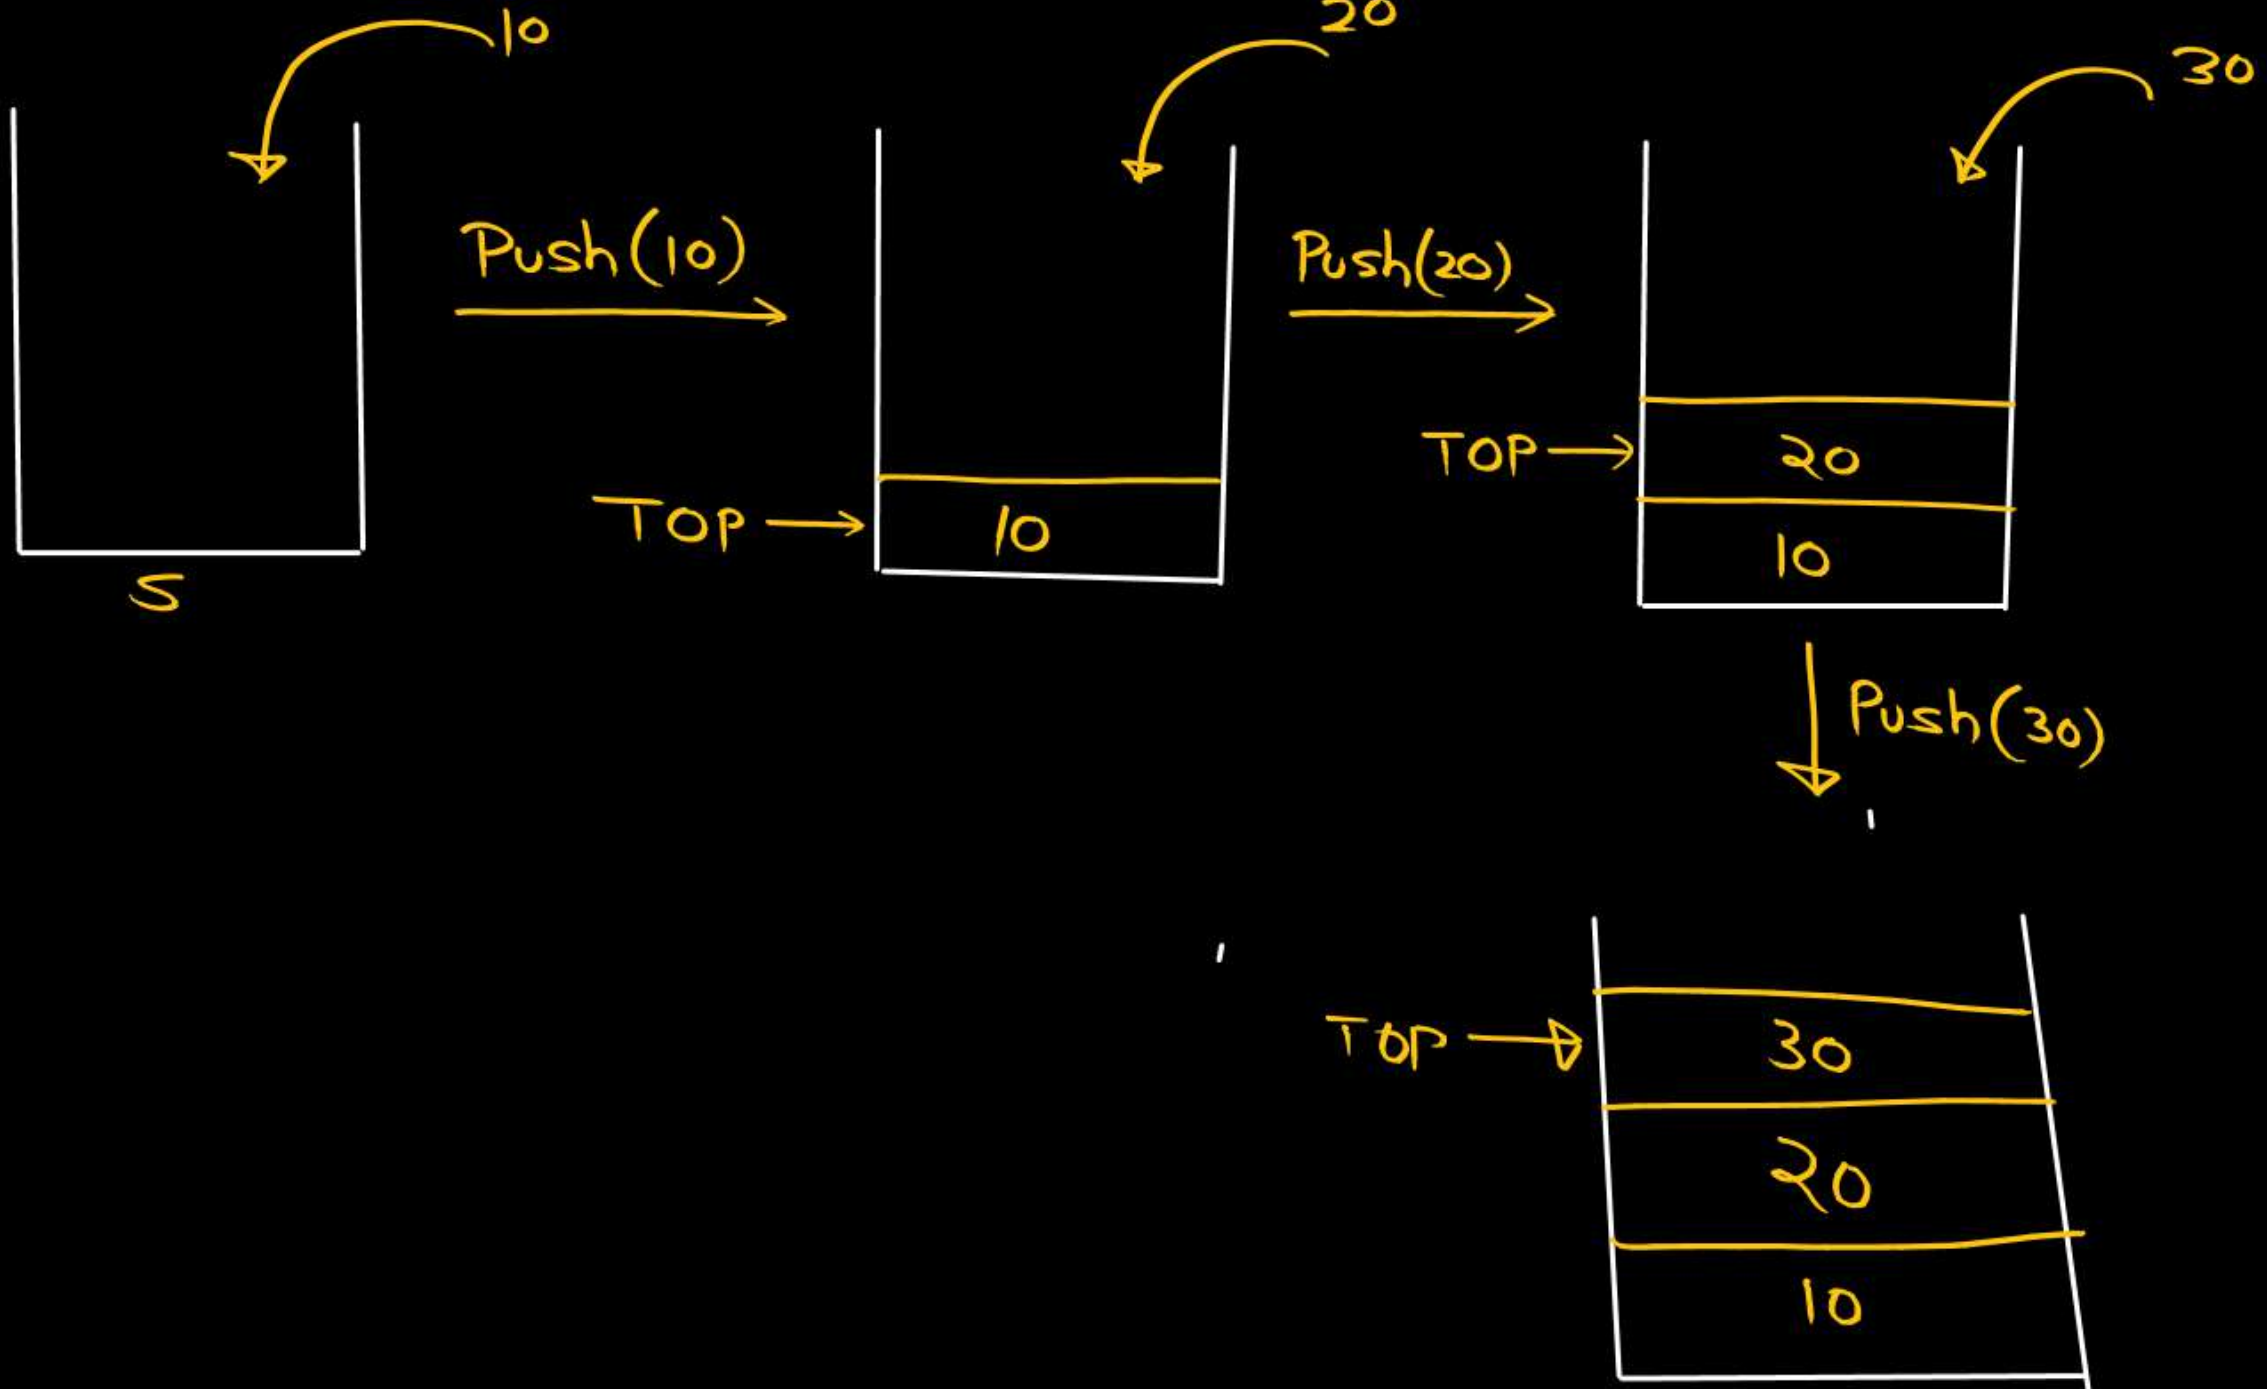

Initially: Empty stack

TOP : Points to most  
recently added  
element

# Stack as ADT

Stack of numbers

- (i) Push
- (ii) Pop
- (iii) IsEmpty

IsFull( )

## Applications

- 1.) Tower of Hanoi
- 2.) DFS
- 3.) Backtracking
- 4.) Recursion
- 5.) Infix to prefix conversion
- 6.) Infix to postfix conversion
- 7.) prefix Evaluation
- 8.) postfix Eval.
- 9.) Balanced parenthesis checking

To delay  
To post-poned certain decision  
wait करना

≡

void main() {

≡

}

```
#define SIZE 6  
int stack[SIZE];
```

stack

Initially, stack is Empty.

TOP : Most recently added  
elements

↘ No valid index

TOP = -1

```
#define SIZE 6  
int stack[SIZE];
```

1.) Push(10) :  $TOP = TOP + 1$   
 $stack[TOP] = ele$

```
#define SIZE 6  
int stack[SIZE];  
int TOP = -1
```

stack

~~TOP = -1~~

1.) Push(10) :  $TOP = TOP + 1$   
 $stack[TOP] = ele$

दिए गए हैं

```
void Push( int x )  
{
```

```
    TOP = TOP + 1  
    stack[TOP] = x;
```

```
}
```

```
#define SIZE 6
int stack[SIZE];
int TOP = -1
```

stack

- 1.) Push(10) : 0
- 2.) Push(20) : 1
- 3.) Push(30) : 2
- 4.) Push(40) : 3
- 5.) Push(50) : 4
- 6.) Push(60) : 5

```
void Push( int x )
{
```

```
    TOP = TOP + 1;
    Stack[TOP] = x;
```

```
}
```

दिलकत है

Push(70) : overflow  
↓ insert

$\left\{ \begin{array}{l} \text{No loop} \\ \text{No rec.} \end{array} \right.$

constant time

$O(1)$

```
void Push(int x)
{
    if (TOP == SIZE-1)
    {
        pf("overflow");
        return;
    }
    TOP = TOP + 1;
    stack[TOP] = x;
}
```

```
#define SIZE 6  
int stack[SIZE];  
int TOP = -1
```

stack

TOP = 5

0 1 2 3 4 5  $\nwarrow$  TOP

```
int Pop( ) {  
    int temp;  
    temp = stack[TOP];  
    TOP = TOP - 1;  
}
```

```
#define SIZE 6  
int stack[SIZE];  
int TOP = -1
```

stack

TOP = ~~5~~  
4

↓

```
int Pop( ) {  
    int temp;  
    temp = stack[TOP];  
    TOP = TOP - 1;  
    return temp;  
}
```

```
#define SIZE 6  
int stack[SIZE];  
int TOP = -1
```

stack

TOP = -1

Underflow

```
int Pop( ) {  
    int temp;  
    temp = stack[TOP];  
    TOP = TOP - 1;  
    return temp;  
}
```

```
#define SIZE 6  
int stack[SIZE];  
int TOP = -1
```

stack

TOP = -1

Problem?

underflow

constant time

int Pop( ) {

if (TOP == -1) {  
    return INT\_MIN;

int temp; }

temp = stack[TOP];

TOP = TOP - 1;

return temp;

Collection of

```
int stack[];  
int TOP;
```

```
int TOP = -1;  
void main() {
```

|||

]

```
#define SIZE 10
```

```
struct stack {  
    int arr[SIZE];  
    int TOP;  
}
```

↑  
No memory is  
allocate  
↓

```
void main() {  
    struct stack s;  
    s.TOP = -1;  
    ==  
    ==  
    ==  
}
```

```
#define SIZE 10
```

```
struct stack {  
    int arr[SIZE];  
    int TOP;  
}
```

↑  
No memory is  
allocate  
↓

Push(            )

↓  
(i) ~~push~~ stack में

(ii) what to push

```
void main() {  
    struct stack s1, s2;  
    s1.TOP = -1;  
    ==  
    ==  
    ==  
}
```

Call by  
value

{  
 Push(s1, 10);  
 Push(s2, 20);  
}

Push(&s1, 10);  
Push(&s2, 20);

```

struct stack {
    int arr[SIZE];
    int TOP;
};

```

```

void main() {

```

```

    struct stack s1, s2;
    s1.TOP = s2.TOP = -1;

```

```

    Push(&s1, 10);

```

```

void Push(struct stack *Ptr, int x)

```

```

{

```

```

    if (TOP == SIZE - 1)

```

```

        ↓↓

```

```

    if (Ptr → TOP == SIZE - 1)
    {

```

```

    }

```

```

}

```

```
struct stack {
    int arr[SIZE];
    int TOP;
};
```

```
void main() {
```

```
    struct stack s1, s2;
    s1.TOP = s2.TOP = -1;
```

```
    Push(&s1, 10);
```

```
void Push(struct stack *Ptr, int x)
```

```
{
```

```
    if (Ptr → TOP == SIZE - 1)
```

```
        return;
```

```
    TOP = TOP + 1; X
```

```
    Ptr → TOP = Ptr → TOP + 1; ✓
```

```
}
```

```

struct stack {
    int arr[SIZE];
    int TOP;
};

```

```

void main() {

```

```

    struct stack s1, s2;
    s1.TOP = s2.TOP = -1;

```

```

    Push(&s1, 10);

```

$\text{arr}[\text{TOP}] = x$

```

void Push(struct stack *Ptr, int x)
{

```

```

    if (Ptr->TOP == SIZE-1)
        return;

```

```

    Ptr->TOP = Ptr->TOP + 1;

```

```

    Ptr->arr[Ptr->TOP] = x;

```

```

}

```

## Stack permutation

Given  $n=3$

1, 2, 3

no. of permutations

$3!$

1) 1, 2, 3

2) 1, 3, 2

3) 2, 1, 3

4) 2, 3, 1

5) 3, 1, 2

6) 3, 2, 1

6 possible  
permutation

Given 3 elements 1, 2, 3  
and their order of insertion  
is 1, 2, 3 (fix)

u can perform pop() any time.

Q) Possible order of pop()
